

A month ago, this wood was excavated in Peru.

Our report on its age has already reached the archaeologist at the site.

When it's important to determine the age of your samples quickly, call upon Isotopes, Inc. Our radiocarbon laboratory and counting facilities have been expanded to give you the fastest dating service available, anywhere. You will receive your complete report within four weeks after we receive your sample. Often, results can be reported within three weeks.

The prices for our radiocarbon dating have just been reduced. They are based on the number of samples we date for you during any given 12-month period. The prices range from \$160 for a single sample to \$120, per sample, for 50 or more samples.

Our sample handling and low-level gas counting techniques are designed to insure complete freedom

from contamination and isotopic fractionation while, at the same time, ensuring maximum sensitivity. Every radiocarbon sample dated in our laboratories is counted at least twice on different days to eliminate the possibility of error due to traces of residual contamination by radioactive radon gas.

Our internal gas proportional counters are housed in an underground twenty-ton steel shield. These counters are coupled to fully transistorized electronic circuits to provide a stable, low background system.

For complete details on the age determination services of Isotopes, Inc. call Bob Adkins at 201-NO4-7070 or write Isotopes, Inc., 124 Woodland Avenue, Westwood, New Jersey 07675.
